

Let Your Treaties Be Your Guide

Beyontec Reinsurance gives you the flexibility to gather data and create reports based on your requirements and treaties. It automatically sends emails to various stakeholders when loss limits under treaty are approached, tracks task status, allocates premium and policy losses, and stores all risk-related documents. And it automatically allocates policy premium to treaties with the option to change them.

In addition, Beyontec Reinsurance lets you:

- Give real-time allocations to treaty participants.
- Sort, list, and search risk accumulation by specific data
- Automatically allocate XOL treaties for claims.
- Create and add coinsurance leader and follower policies, as well as facultative inward and outward policies
- Automatically email treaty participants for claims above defined limits
- Create out-of-sequence endorsements for mid-term FAC participants
- Track claims and automates notices of recoveries.
