

Automobile Windshield Claims Settled With Your Business Rules

Our pre-configured bots can be programmed to follow your business rules and processes precisely and automatically. For example, a bot can be programmed to settle claims for windshield damage that have coverage limits of \$500 and deductibles below the coverage limits.

Step 1: The bot logs in to the claims system and navigates to the screen that enables a query for admitted claims and looks for claims for windshield damage. After identifying the desired claim, the bot enters the number for that claim.

When the desired claim comes up, the bot checks the policy limit for windshield glass. In this case, the amount is \$490.

Step 2: Having verified that the claim is below the \$500 limit, the bot verifies the deductible and payment amounts and approves the claim for payment.

The bot reviews the nature of the claim — in this case an accident at an intersection — and checks to see if a photo of the damage has been submitted.

Continued >>

Step 3: Once the bot verifies that a photo of the damaged vehicle has been submitted, it goes back to validate the payment of the claim.

ROI = Real Opportunity Installed

We have more than 25 pre-configured bots that automate processes for claims, billing, accounting, underwriting, and more. They provide faster response and resolution times. They yield increases in operational efficiency that exceed 60 percent with 100 percent accuracy. They provide scalability, reliability, and 24/7 availability. They help increase the satisfaction of policyholders and agents. They deploy in just four to six weeks. And most important, they provide ROI in three to six months.
